

# STAINLESS STEEL SHOWER

THE BEST SOLUTION FOR  
GETTING GREEN AND CLEAN

**WWW.OMEGAPRODUCTSINC.COM**  
**800-851-4616**

## Why Omega

### Quality & Craftsmanship

Omega has been producing quality showers for over 30 years. Customers appreciate the durability of a shower that will last a lifetime. Omega uses 300 series stainless steel; the best metal available for manufacturing stainless shower units.

### Custom Fit

Omega has the skills and technology for custom orders, building around customer specifications.

### Ease of Installation

Knockdown units provide simple and easy installation.

### LEED Credits

Omega's showers qualify for LEED credits under Section 4 "LEED Green Building Rating Systems".

## Why Stainless Steel

### Corrosion Resistant Steel (CRES)

Stainless is a low carbon metal containing less than 10% chromium and is a non-ferrous metal that does not rust.

### Hygiene

The easy cleaning ability of stainless makes Omega's shower a premiere choice for strict hygiene conditions, such as hospitals, dormitories, and public facilities.

### Sustainable

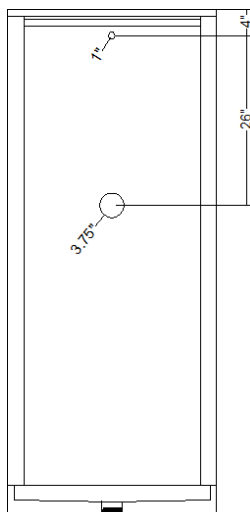

The type of stainless steel used is a closed-loop self-sustainable material. Stainless is 100% recyclable and does not compromise the quality of the material or the environment.

### Impact Resistance

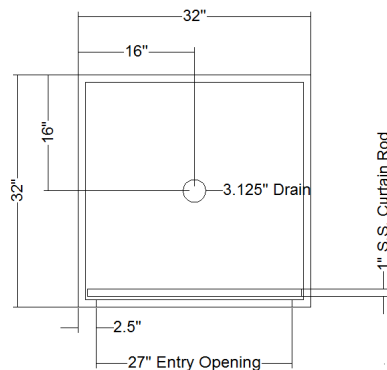

The strength of Omega's showers can withstand the toughest environments; from elevated temperatures to far below freezing, making stainless steel well suited for cryogenic applications.

### Cost Effective

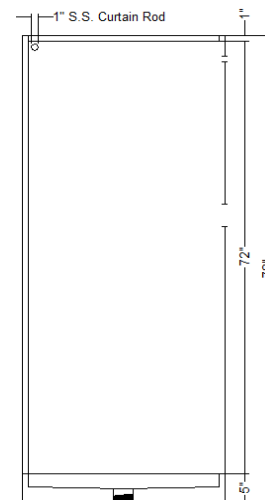

The useful life of Omega's shower far exceeds any other in the market. No discoloration, mold, leaks, cracks, or replacements.
